

IN THE CLAIMS:

Please cancel Claims 47 - 49 without prejudice. Please amend Claims 35, 38, 40, 42 - 45, 50, and 52 as follows.

1 - 4. (Previously Cancelled)

5. (Once Amended / Previously Amended) A method of etching a shaped cavity in a substrate, wherein initial etching of said shaped cavity is performed using an initial process chamber pressure, wherein continued etching of the shaped cavity is performed using a process chamber pressure that is at least 25% lower than said initial process chamber pressure, and wherein etching of said shaped cavity is followed by an etch finishing step, wherein said etch finishing step is performed using a process chamber pressure that is within a range of about 80% to about 100% of said initial process chamber pressure.

6. (Once Amended / Previously Amended) A method of etching a shaped cavity in a substrate, wherein the method comprises:

a) an initial cavity etch step during which said substrate is etched to form a shaped cavity using an initial process chamber pressure;

b) at least one additional etch step during which continued etching of said shaped cavity is performed using a process chamber pressure that is within a range of about 25 % to about 50 % lower than said initial process chamber pressure; and

c) an additional etch step following step b), during which continued etching of said shaped cavity is performed using a process chamber pressure that is at least 40 % lower than the process chamber pressure used during the performance of step b).

7. (Once Amended / Previously Amended) The method of Claim 6, wherein said etch step c) is performed using a process chamber pressure that is within a range of about 40% to about 50% lower than the process chamber pressure used during the performance of etch step b).

8. (Original) The method of Claim 6, wherein said method further comprises an etch finishing step, wherein said etch finishing step is performed using a process chamber pressure that is within a range of about 80 % to about 100 % of said initial process chamber pressure.

9. (Once Amended / Previously Amended) The method of Claim 8, wherein said etch finishing step is performed using a process chamber pressure that is about 90% of said initial process chamber pressure.

10. (Once Amended / Previously Amended) The method of Claim 6, or Claim 8, wherein said substrate comprises single-crystal silicon, and etching is performed using a plasma containing reactive fluorine species.

11. (Previously Cancelled)

12. (Once Amended / Previously Amended) The method of Claim 10, wherein said plasma source gas further comprises an additive gas selected from the group consisting of O<sub>2</sub>, HBr, Cl<sub>2</sub>, N<sub>2</sub>, and combinations thereof.

13. (Once Amended / Previously Amended) The method of Claim 6 or Claim 8, wherein etching is performed using a plasma generated from a source gas comprising a gas selected from the group consisting of SF<sub>6</sub>, CF<sub>4</sub>, Cl<sub>2</sub>, HBr, and combinations thereof.

14. (Once Amended / Previously Amended) The method of Claim 13, wherein said plasma source gas further comprises an additive gas selected from the group consisting of Ar, O<sub>2</sub>, N<sub>2</sub>, and combinations thereof, wherein said additive gas is provided in an amount sufficient to improve profile control during etching.

15. (Original) The method of Claim 13, wherein said plasma source gas further comprises an essentially nonreactive, diluent gas selected from the group consisting of He and Xe.

16. (Original) The method of Claim 14, wherein said plasma source gas further comprises an essentially nonreactive, diluent gas selected from the group consisting of He and Xe.

17 - 22. (Previously Cancelled)

23. (Once Amended / Previously Amended) The method of Claim 6 or Claim 8, wherein said method includes performing the following steps prior to said initial cavity etch step: etching said substrate to a predetermined depth to form a shaped opening, then forming a conformal protective layer overlying at least a sidewall of said shaped opening, wherein said protective layer comprises a material having a different etch selectivity than said substrate

24. (Once Amended / Previously Amended) The method of Claim 23, wherein said substrate comprises single-crystal silicon and said protective layer comprises silicon oxide.

~~25 - 26. (Previously Cancelled)~~

27. (Previously Added) The method of Claim 5, wherein said substrate comprises single-crystal silicon, and etching is performed using a plasma containing reactive fluorine species.

28. (Previously Added) The method of Claim 27, wherein said plasma source gas further comprises an additive gas selected from the group consisting of O<sub>2</sub>, HBr, Cl<sub>2</sub>, N<sub>2</sub>, and combinations thereof.

29. (Previously Added) The method of Claim 5, wherein etching is performed using a plasma generated from a source gas comprising a gas selected from the group consisting of SF<sub>6</sub>, CF<sub>4</sub>, Cl<sub>2</sub>, HBr, and combinations thereof.

30. (Previously Added) The method of Claim 29, wherein said plasma source gas further comprises an additive gas selected from the group consisting of Ar, O<sub>2</sub>, N<sub>2</sub>, and combinations thereof, wherein said additive gas is provided in an amount sufficient to improve profile control during etching.

31. (Previously Added) The method of Claim 29, wherein said plasma source gas further comprises an essentially nonreactive, diluent gas selected from the group consisting of He and Xe.

32. (Previously Added) The method of Claim 30, wherein said plasma source gas further comprises an essentially nonreactive, diluent gas selected from the group consisting of He and Xe.

33. (Previously Added) The method of Claim 5, wherein said method includes performing the following steps prior to said initial cavity etch step: etching said substrate to a predetermined depth to form a shaped opening, then forming a conformal protective layer overlying at least a sidewall of said shaped opening, wherein said protective layer comprises a material having a different etch selectivity than said substrate.

34. (Previously Added) The method of Claim 33, wherein said substrate comprises single-crystal silicon and said protective layer comprises silicon oxide.

35. (Twice Amended / Presently Amended) A method of etching a shaped cavity in a substrate, wherein the method comprises:

a) an initial cavity etch step during which said substrate is etched to form a shaped cavity using an initial process chamber pressure; and

b) at least one additional etch step during which continued etching of said shaped cavity is performed using a process chamber pressure that is at least 25% lower than said initial process chamber pressure, wherein etching is performed using a plasma which consists ~~generated from a source gas consisting~~ essentially of chemically reactive species generated from SF<sub>6</sub> and Ar which are used in combination with species generated from an inert gas.

36. (Once Amended / Previously Amended) The method of Claim 35, wherein said at least one additional etch step includes a first etch step which is performed using a process chamber pressure that is within a range of about 30% to about 50% lower than said initial process chamber pressure.

37. (Once Amended / Previously Amended) The method of Claim 36, wherein said first etch step is performed using a process chamber pressure that is about 30% lower than said initial process chamber pressure.

38. (Previously Added / Twice Amended / Currently Amended) ~~The method of Claim 37;~~  
A method of etching a shaped cavity in a single-crystal silicon substrate, wherein the method comprises:

a) an initial cavity etch step during which said single crystal silicon substrate is etched to form a shaped cavity using an initial process chamber pressure; and

b) at least one additional etch step during which continued etching of said shaped cavity is performed using a process chamber pressure that is at least 25 % lower than said initial process chamber pressure, wherein etching is performed using a plasma generated from a source gas comprising SF<sub>6</sub> and Ar, wherein said at least one additional etch step includes a first additional etch step which is performed using a process chamber pressure that is within a range of about 30% to about 50% lower than said initial process chamber pressure, and wherein said at least one additional etch step further includes a second additional etch step during which continued etching of said shaped cavity is performed using a process chamber pressure that is at least 40% lower than the process chamber pressure used during the performance of said first additional etch step.

39. (Previously Added / Once Amended / Previously Amended) The method of Claim 38, wherein said second additional etch step is performed using a process chamber pressure that is within a range of about 40% to about 50% lower than the process chamber pressure used during the performance of said first additional etch step.

40. (Previously Added / Once Amended / Currently Amended) ~~The method of Claim 35 or Claim 36 or Claim 39;~~ A method of etching a shaped cavity in a single crystal silicon substrate, wherein the method comprises:

a) an initial cavity etch step during which said single crystal silicon substrate is etched to form a shaped cavity using an initial process chamber pressure; and

b) at least one additional etch step during which continued etching of said shaped cavity is performed using a process chamber pressure that is at least 25% lower than said initial process chamber pressure, wherein etching is performed using a plasma generated from a source gas comprising SF<sub>6</sub> and Ar, and wherein, subsequent to said at least one additional etch step, an etch finishing step is performed using a process chamber pressure that is within a range of about 80% to about 100% of said initial process chamber pressure.

41. (Previously Added) The method of Claim 40, wherein said etch finishing step is performed using a process chamber pressure that is about 90% of said initial process chamber pressure.

42. (Previously Added / Once Amended / Currently Amended) The method of Claim ~~35~~ 38 or Claim 40, wherein said plasma source gas further comprises an additive gas selected from the group consisting of O<sub>2</sub>, HBr, Cl<sub>2</sub>, N<sub>2</sub>, and combinations thereof.

43. (Previously Added / Once Amended / Currently Amended) The method of Claim ~~35~~ 38 or Claim 40, wherein said plasma source gas further comprises an additive gas selected from the group consisting of Ar, O<sub>2</sub>, HBr, Cl<sub>2</sub>, N<sub>2</sub>, and combinations thereof, wherein said additive gas is provided in an amount sufficient to improve profile control during etching.

44. (Previously Added / Once Amended / Currently Amended) The method of Claim 35 or ~~Claim 42 or Claim 43~~, wherein said ~~plasma source~~ inert gas further ~~comprises an essentially nonreactive, diluent gas~~ is selected from the group consisting of Ar, He and Xe.

45. (Previously Added / Once Amended / Currently Amended) The method of Claim ~~35~~, 38 or Claim 40, wherein said method includes performing the following steps prior to said initial cavity etch step: etching said substrate to a predetermined depth to form a shaped opening, then forming a conformal protective layer overlying at least a sidewall of said shaped opening, wherein said protective layer comprises a material having a different etch selectivity than said substrate.

46. (Previously Added) The method of Claim 45, wherein said protective layer comprises silicon oxide.

47. (Cancelled, Without Prejudice)

48. (Cancelled, Without Prejudice)

49. (Cancelled, Without Prejudice)

50. (Previously Added / Twice Amended / Currently Amended) ~~The method of Claim 48;~~

A method of etching a shaped cavity in a substrate, wherein the method comprises:

- a) etching said substrate to a predetermined depth to form a shaped opening;
- b) forming a conformal protective layer overlying at least a sidewall of said shaped opening, wherein said protective layer comprises a material having a different etch selectivity than said substrate;
- c) an initial cavity etch step during which said substrate is etched to form a shaped cavity using an initial process chamber pressure; and
- d) at least one additional etch step during which continued etching of said shaped cavity is performed using a process chamber pressure that is at least 25% lower than said initial process chamber pressure, wherein said at least one additional etch step includes a first additional etch step which is performed using a process chamber pressure that is within a range of about 30% to about 50% lower than said initial process chamber pressure, and wherein said at least one additional etch step further includes a second additional etch step during which continued etching of said shaped cavity is performed using a process chamber pressure that is at least 40% lower than the process chamber pressure used during the performance of said first additional etch step.

51. (Previously Added / Once Amended / Previously Amended) The method of Claim 50, wherein said second additional etch step is performed using a process chamber pressure that is within

a range of about 40% to about 50% lower than the process chamber pressure used during the performance of said first additional etch step.

52. (Previously Added / Once Amended / Currently Amended) The method of ~~Claim 47 or Claim 48~~ or Claim 50, wherein, subsequent to said at least one additional etch step, an etch finishing step is performed using a process chamber pressure that is within a range of about 80% to about 100% of said initial process chamber pressure.

53. (Previously Added) The method of Claim 52, wherein said etch finishing step is performed using a process chamber pressure that is about 90% of said initial process chamber pressure.
